Managerial Accounting James Jiambalvo
2019-10-15 "This book is intended to drive home the fundamental ideas of managerial accounting and motivate students to actually want to study the subject. As you will see, the text has a number of unique features that help accomplish these goals. Based on my teaching experience and from what we have heard from professors using the previous editions, we believe students and professors want a textbook that: Recognizes that most students will become managers, not accountants Focuses attention on decision making Stresses the fact that "You Get What You Measure" Motivates students to learn managerial accounting by connecting concepts and techniques to the real world Recognizes the importance of service businesses Is clear,

concise and current"

Guide to Management Accounting Inventory

turnover for managers Shigeaki Takai

2020-08-11 According to the Ito report
announced by the Ministry of Economy, Trade
and Industry in August 2014, it was pointed out
that the issues of Japanese companies are not in
asset turnover rates and financial leverage, but
in terms of their ability to make earnings,
compared to western companies. However, I
believe that both accounts receivable turnover

and inventory turnover are generally lower than those in Europe and the United States, among asset turnover rates, which is an issue for CCC (Cash Conversion Cycle) management. Inventory is an important management resource. Inventory is said to be a source of profit for business, at the same time, to cause loss. Especially in manufacturing, retail and wholesale business, management indicators are used to measure whether product inventory is being converted into sales efficiently. In general, the following two are used. 1. Inventory turnover rate
Inventory turnover (times) = sales · cost of sales (annual) ÷ inventory amount
The inventory turnover rate is mainly used by executives for presentations for investors or shareholders. 2. Inventory turnover period
Inventory turnover period = inventory amount ÷ sales or cost of sales (monthly or daily)
In fast-rotating industries such as foods, the daily sales are used for denominator and "days of stock days" is indicated. The inventory rotation period is

practically used well. Annual average and month end stock are used for inventory, but the actual value for sales period / cost of sales is used for that period. It is enough to explain the past and current situation of inventory, but I think that it is inappropriate as an indicator for future decision-making internally. In other words, it is not inventory turnover as management accounting. I am convinced that inventory turnover days are an indicator that can assist decision-making to be shared by management, sales department in charge of operations, manufacturing, procurement, and logistics personnel as inventory-based management consultant.
