Mental Spaces in Grammar Barbara Dancygier 2005-07-07 Conditional constructions have long fascinated linguists, grammarians and philosophers. In this pioneering new study, Barbara Dancygier and Eve Sweetser offer a new descriptive framework for the study of conditionality, broadening the range of richly described conditional constructions. They explore theoretical issues such as the mental-space-building processes underlying conditional thinking and the form-meaning relationship involved in expressing conditionality. Using a broad range of attested English conditional constructions, the book examines inter-constructural relationships. Within the framework of Mental Spaces Theory, shared parameters of meaning are shown to be

relevant to conditional constructions generally, as well as related temporal and causal constructions. This significant contribution to the field will be welcomed by a wide range of researchers in theoretical and cognitive linguistics.

The Great University Gamble Andrew McGettigan 2013-04-09
In 2010 the UK government proposed huge cuts and market-driven reforms for Universities. The proposals provoked widespread opposition in the form of street protests, occupations, and online campaigns. As the dust settles, Andrew McGettigan surveys the emerging brave new world of Higher Education. Displaying a stunning grasp of the policy details, he looks at the long term impact of the changes, which have been obscured by the focus on tuition fee increases. What will be the role of

universities within society? How will they be funded? What kind of experiences will they offer students? Written in a clear and engaging style, *The Great University Gamble* outlines the architecture of the new policy regime, which many find difficult to grasp. It is an urgent warning that our Universities are being transformed from institutions of real learning to profit-driven degree factories.

Chrysler's Turbine Car Steve Lehto 2010-10-01
Offering a behind-the-scenes look into the world of automotive research and development in the 1960s, this engaging narrative traces the birth of Chrysler's alternative "jet" car and reveals the story behind its sudden and mysterious demise. Relying on extensive research and firsthand accounts from surviving members of the turbine car program—including the metallurgist who created the exotic metals for the engine and the test driver who drove it at Chrysler's proving grounds—this chronicle documents the bold development of an automobile with a jet turbine engine. In addition to running well on virtually any flammable liquid—including kerosene, vodka, heating oil, and Chanel N°5 perfume—the pioneering engines had one fifth the number of moving parts and required less maintenance than conventional engines. Despite the fleet's amazing performance over millions of miles by test drivers, Chrysler pulled the plug on the project and crushed almost all of the cars. The reasons behind the surprising end to the jet car fleet are finally explained here.
