Psychopharmacology Herbert Mwebe 2018-09-03 This jargon-free guide is suitable for all trainee and registered health professionals who require knowledge and understanding of drugs used in the treatment of mental health conditions for prescribing or administering purposes. A life-saving pocketbook that you can easily carry anywhere you go! Introductory material provides a background on psychotropic drugs, the etiology of mental illness, some of the commonly used drugs in practice and brief notes on common non-pharmacological interventional options. It also examines biochemical and neurodevelopmental theories and the link to the pathophysiology of mental illness as well as clinical decision making. The central chapters of the book provide comprehensive coverage of all the major medications used in mental health. Each focuses on a specific class of drug, detailing the most commonly used medicines, including side effects, average doses, contra-indications and clinical management interventions that may be required. At the end of each chapter a series of review questions enable readers to review their learning, and theory is clearly related to practice throughout.

Veterinary Drug Handbook Elizabeth J. Davidson 2003-01-06 The Veterinary Drug Handbook: Client Information Edition helps veterinarians and pharmacists bridge the drug information gap between themselves and the people (clients; owners) who are treating their animals. Several studies have demonstrated that people receiving verbal information from health professionals retain very little of that information once they leave the premises of their health provider. The information provided in this book will supplement the actual care provided and help in the task at hand, namely to improve the health of animals. The authors have included drugs that are commonly prescribed by small animal and equine practitioners, both those that are veterinary and "human" labeled medications. The authors also provide this information in a format that can be understood by any reader. The information presented in these monographs will enable the animal caregiver to be better informed about the medication in question and to work with their veterinarian and pharmacist on the journey to positive therapeutic outcomes.

Critical Care Intravenous Infusion Drug Handbook Gary J. Algozzine 2004-12 This practical reference was developed to meet the needs of critical care and emergency nurses, physicians, and pharmacists in administering complex drugs given by IV infusion. Presented in an easy-to-use handbook format, it contains information on how to dose and administer complex and commonly used critical care drugs. Each drug is listed with information about what its most common uses are, how to prepare the drug infusion for patient administration, the most common dosages, the most common warnings and adverse reactions, compatibility with other drug infusions, and general nursing considerations. One of its most unique features is the inclusion of calculation factors. Dosing charts allow the healthcare professional to quickly determine the appropriate dose in a matter of seconds. Drip Rate Calculation Charts and Dosing Charts allow the user to quickly see how to mix and prepare drugs that are usually needed by patients on an immediate, urgent basis. Covers 44 of the most common intravenous infusion critical care drugs. Calculation factors for each drug are unique, simplifying an otherwise complicated process and substantially reducing the chance of medication errors.

Includes Nursing Considerations for each drug. This reference is not only useful for critical care nurses, but also general medicine or general surgical nurses, hospital pharmacists, physicians, cardiologists, anesthesiologists, and emergency room physicians. Blank pages in the back of the book allow readers to take notes for quick reference. The Top 100 Drugs Andrew Hitchings 2018-10-25 Now in its second edition, this highly successful guide to safe prescribing of the most common classes of drugs is your starting point for safe and effective practice. The first edition was a direct response to requests from students for a compendium of the 100 most important drugs in the NHS. Research led by Professor Emma Baker identified the 'top 100 drugs' by their importance and prescribing frequency. The top 100 drugs and the five most important intravenous fluids are presented using a clear, consistent layout across double-page spreads. Drugs are arranged alphabetically and also listed by organ system and clinical indication, providing multiple pathways into the information. Clinical pharmacology is discussed under the headings: common indications; mechanisms of action; important adverse effects; warnings; and important interactions. Practical prescribing is discussed under the headings: prescription; administration; communication; monitoring; and cost. A clinical tip is presented for every

drug. Single-best-answer questions are provided for self-assessment and to show how information from several drugs may be integrated.
