Linux Essentials Adidas Wilson Linux is the only endpoint OS that is growing globally. As one person put it, "Linux is the Nikola Tesla of information technology". This OS is used in a myriad of devices including smartphones, digital video recorders, televisions, airline entertainment systems, digital signage, automobile control systems, switches, routers, the desktop, among many others. Windows vs Linux OS debate will not end anytime soon. However, it is very clear that Linux is winning. If you have a hard time believing this, consider the influence of Linux on Android and UNIX-based Apple devices. The only reason Windows is still common is because of its influence on many core applications. This is about to change, and Linux is, without a doubt, the future. Microsoft has been the king of End User Computing (EUC) for about 30 years. Nonetheless, there are factors such as security concerns that are pushing EUC to the data center. Due to this, there is a desire to reduce the costs and risks that are required to maintain Windows on the edge. Linux OS offers the perfect solution for this. Linux is layered and lightweight which enables it to perform very well across many types of devices. It also offers high speed and responsiveness. Because

Linux has so many inherent advantages, it is preferred for endpoint applications.

Windows users face a lot of challenges when they start using Mac OS X for the first time. Thus, if there is a guide available in the market in the form of an eBook, it is always good to use it. Linux is the best operating system for any kind of cloud-based project, it is always good to learn some amount of Linux and its basics. Almost every technology-based things run on Linux now. Some of the things that are dependent on Linux are: ● Most of the supercomputers in the world. ● Some of the stock exchanges like the NYSE. ● The air traffic control systems. ● Android phones and tablets. ● CERN or the largest particle physics laboratory of the world. ● The high-speed rails of Japan. There are many reasons why Linux is used instead of Windows: ● Linux is supported on older computers. There are no security updates for

Windows whereas quite a good number of Linux distributions are created only for older hardware and can be updated regularly. ● Some of the desktop and Linux distribution environments are more used to the traditional uses of computer users besides Windows 8 and Windows 10. ● The download size for Windows 10 is huge. Usually, a Linux distribution is available at just over a gigabyte. ● Linux is available with free software and that can be changed anytime. ● Linux is always safer than Windows. ● Linux is also a better performer than Windows. ● Linux can be made to feel, look and behave exactly in the same way as the user wants.
