Philosophy for Girls Melissa M. Shew 2021 "This revolutionary book empowers its readers intellectually by providing a snapshot of perennial and timely philosophical topics. Written by twenty expert women in philosophy and representing a diverse and pluralistic approach to philosophy as a discipline, this book appeals to a wide audience. Individual readers, especially girls and women ages 16-24, as well as university and high school educators and students who want a change from standard anthologies that include few or no women will find value in these pages. This volume contains several notable features: the book is divided into four sections that correspond to major fields in Philosophy- metaphysics, epistemology, social and political philosophy, and ethics-but the chapters within those sections provide fresh ways of understanding those fields. " Every chapter begins with a lively anecdote about a girl or woman in literature, myth, history, science, or art to introduce the chapter's specific topic." Chapters are dominated by women's voices, with nearly all primary and secondary sources used coming from women in the history of philosophy and a diverse set of contemporary women philosophers. "All chapters offer the authors' distinct philosophical perspectives written in their own voices and styles, representing diverse training, backgrounds, and interests." The Introduction and Prologue explicitly invite the book's readers to engage in philosophical conversation and reflection, thus setting the stage for continued contemplation and dialogue beyond

the book itself. The result is a rigorous yet accessible entry-point into serious philosophical contemplation designed to embolden and strengthen its readers' own senses of philosophical inquiry and competence. Simply Philosophical Quotes Abstract Thoughts 2021-07-22 Do you want to take a tour through time and go deep into the minds of the most influential philosophers of all humanity? If you want to immerse yourself in some words of wisdom from these great thinkers, then keep reading... 'It is the mark of an educated mind to be able to entertain a thought without accepting it' - Aristotle I have been a deep thinker for as long as I can remember. I would continually question existence, identity, reality, ethics, politics, religion, metaphysics and everything in between. I've always found it fascinating to entertain those thoughts, but for the most part, could never share it with others as it can come off strange and intense to many who are not on the same 'wavelength'. Sound familiar? Realising that not a lot of others might think in the same exploratory way as me, I decided to look elsewhere to see if other thinkers of the past thought or shared similar ideas. Aristotle, Plato, Descartes to name a few; they all shared such a wise and unique way of thinking, with the continuous pursuit to challenge conventional knowledge and thought processes. Many of these philosophers were strong believers that you should always question everything. They believed that for one to become fully realised you must first begin to look inside and reflect on yourself and your thoughts. Do you sometimes find yourself deep in thought, feeling connected to a train of thought and your mind in a way that feels foreign but natural? Do you ever find yourself contemplating reality, the origins

of ethics, or if our current social structure is the most efficient to society it can be? Through reading quotes we can travel through time and by practice of evaluation we can start connecting with how these thinkers thought. We can read a quote and resonate with it so deeply to the point it's as if we share the same experience as the quoter. This skill can be developed through this practice and has scientifically proven benefits such as increased critical thinking and information organisation. In *Simply Philosophical Quotes* you will discover: A swift introduction to the most influential thinkers of all time Their top 3 teachings and ideas 5 fascinating facts you won't have heard before 915 inspiring, thought-provoking quotes that will leave you deep in reflection The importance of evaluating your own thoughts Philosophers include Plato, Aristotle, Socrates, René Descartes, Confucius, Immanuel Kant, The Buddha, John Locke, Epictetus and Friedrich Nietzsche. If you're looking for an in-depth book on these philosophers' lives and teachings with an expansive evaluation of their quotes then this book is not for you! It's up to you to evaluate these quotes without external influence. Through reading *Simply Philosophical Quotes* you can start to dissect and gain a deeper understanding of the minds of ten of the most influential philosophers of all time. If you want to gain a brief insight into the lives these philosophers lived and their main teachings, and a comprehensive compilation of their best quotes, this book for you. If you want to expand your own thought processes, problem solving skills, decision making, creative thinking, evaluation of ideas and more, this book is absolutely for you.

The Stoic Challenge: A Philosopher's Guide to Becoming Tougher, Calmer, and More Resilient William B. Irvine 2019-09-03 A practical, refreshingly optimistic guide that uses centuries-old wisdom to help us better cope with the stresses of modern living. Some people bounce back in response to setbacks; others break. We often think that these responses are hardwired, but fortunately this is not the case. Stoicism offers us an alternative approach. Plumbing the wisdom of one of the most popular and successful schools of thought from ancient Rome, philosopher William B. Irvine teaches us to turn any challenge on its head. The Stoic Challenge, then, is the ultimate guide to improving your quality of life through tactics developed by ancient Stoics, from Marcus Aurelius and Seneca to Epictetus. This book uniquely combines ancient Stoic insights with techniques discovered by contemporary psychological research, such as anchoring and framing. The result is a surprisingly simple strategy for dealing with life's unpleasant and unexpected challenges--from minor setbacks like being caught in a traffic jam or having a flight cancelled to major setbacks like those experienced by physicist Stephen Hawking, who slowly lost the ability to move, and writer Jean-Dominique Bauby, who suffered from locked-in syndrome. The Stoics discovered that thinking of challenges as tests of character can dramatically alter our emotional response to them. Irvine's updated "Stoic test strategy" teaches us how to transform life's stumbling blocks into opportunities for becoming calmer, tougher, and more resilient. Not only can we overcome everyday obstacles--we can benefit from them, too.

A Brief History of Mathematical Thought Luke Heaton 2017 Emblazoned on many advertisements for the wildly popular game of Sudoku are the reassuring words, "no mathematical knowledge required." Anxiety about math plagues many of us, and school memories can still summon intense loathing. In *A Brief History of Mathematical Thought*, Luke Heaton shows that much of what many think-and fear-about mathematics is misplaced, and to overcome our insecurities we need to understand its history. To help, he offers a lively guide into and through the world of mathematics and mathematicians, one in which patterns and arguments are traced through logic in a language grounded in concrete experience. Heaton reveals how Greek and Roman mathematicians like Pythagoras, Euclid, and Archimedes helped shape the early logic of mathematics; how the Fibonacci sequence, the rise of algebra, and the invention of calculus are connected; how clocks, coordinates, and logical padlocks work mathematically; and how, in the twentieth century, Alan Turing's revolutionary work on the concept of computation laid the groundwork for the modern world. *A Brief History of Mathematical Thought* situates mathematics as part of, and essential to, lived experience. Understanding it requires not abstract thought or numbing memorization but an historical imagination and a view to its origins. --

Summary of Paul Kleinman's Philosophy 101 Everest Media 2022-03-01T21:00:00Z Please note: This is a companion version & not the original book. Sample Book Insights: #1 The roots of Western philosophy can be found in the work of Greek philosophers during the fifth and sixth centuries. These philosophers, later referred to as pre-Socratic, started to question the world around them. Rather than attributing their surroundings to the Greek gods, they searched for more rational explanations. #2 The term pre-Socratic refers to the differences in ideology and principles between the pre-Socratic philosophers and those of

Socrates. While many pre-Socratic philosophers produced texts, none have survived and most of what we know about the pre-Socratic philosophers is based on the fragments of text that remain and the quotes of later historians and philosophers, which were usually biased. #3 The ancient Greek philosopher and mathematician Pythagoras believed that the basis of all reality was mathematical relations. He believed that numbers were sacred, and with the use of mathematics, everything could be measured and predicted. #4 The school of Elea was the first to use pure reason as the only criterion for finding truth. How the World Thinks Julian Baggini 2018-10-04 *SUNDAY TIMES BESTSELLER* 'There to fill the Sapiens-size hole in your life' Observer In this groundbreaking global overview of philosophy, Julian Baggini travels the world to provide a wide-ranging map of human thought. One of the great unexplained wonders of human history is that written philosophy flowered entirely separately in China, India and Ancient Greece at more or less the same time. These early philosophies have had a profound impact on the development of distinctive cultures in different parts of the world. What we call 'philosophy' in the West is not even half the story. Julian Baggini sets out to expand our horizons in *How the World Thinks*, exploring the philosophies of Japan, India, China and the Muslim world, as well as the lesser-known oral traditions of Africa and Australia's first peoples. Interviewing

thinkers from around the globe, Baggini asks questions such as: why is the West more individualistic than the East? What makes secularism a less powerful force in the Islamic world than in Europe? And how has China resisted pressures for greater political freedom? Offering deep insights into how different regions operate, and paying as much attention to commonalities as to differences, Baggini shows that by gaining greater knowledge of how others think we take the first step to a greater understanding of ourselves.
