Algal Toxins: Nature, Occurrence, Effect and Detection Valtere Evangelista 2008-06-27 This volume contains the lectures and seminars given at the NATO Advanced Study Institute on “Sensor

Systems for Biological Threats: The Algal Toxins Case”, held in Pisa, Italy in October, 2007. The Institute was sponsored and funded by the Scientific Affairs Division of NATO. It is my pleasant duty to thank this institution. This ASI offered updated information on how far the research on algal toxins has gone in the exploration of structures, biosynthesis and regulation of toxins, and the development of technology for bio-monitoring these compounds. Algae can form heavy growths in ponds, lakes, reservoirs and slow-moving rivers throughout the world; algae can house toxins which are usually released into water when the cells rupture or die. Hundreds of toxins have been identified so far. Detection methods, including rapid screening, have been developed to help us learn more about them, especially to find out which toxins are a real threat for people and what conditions encourage their production and accumulation. Early detection

of algal toxins is an important aspect for public safety and natural environment, and significant efforts are underway to develop effective and reliable tools that can be used for this purpose.

**Chips 2020** Bernd Hoefflinger 2012-01-19 The chips in present-day cell phones already contain billions of

sub-100-nanometer transistors. By 2020, however, we will see systems-on-chips with trillions of 10-nanometer transistors. But this will be the end of the miniaturization, because yet smaller transistors, containing just a few control atoms, are subject to statistical fluctuations and thus no longer useful. We also need to worry about a potential energy crisis, because in less than five years from now, with current chip technology, the internet alone would consume the total global electrical power! This book presents a new, sustainable roadmap towards ultra-low-energy (femto-Joule), high-performance electronics. The focus is on the energy-efficiency of the various chip functions: sensing, processing, and communication, in a top-down spirit involving new architectures such as silicon brains, ultra-low-voltage circuits, energy harvesting, and 3D silicon technologies. Recognized world leaders from industry and from the research community share

their views of this nanoelectronics future. They discuss, among other things, ubiquitous communication based on mobile companions, health and care supported by autonomous implants and by personal carebots, safe and efficient mobility assisted by co-pilots equipped with intelligent micro-electromechanical systems, and internet-based education for a billion people from kindergarden to retirement. This book should help and interest all those who will have to make decisions associated with future electronics: students, graduates, educators, and researchers, as well as managers, investors, and policy makers. **World Investment Report 2020** United Nations Conference on Trade and Development (UNCTAD) 2020-07-15 The 30th edition of the World Investment Report looks at the prospects for foreign direct investment and international production during and beyond the global crisis triggered by the

COVID-19 (coronavirus) pandemic. The Report not only projects the immediate impact of the crisis on investment flows, but also assesses how it could affect a long-term structural transformation of international production. The theme chapter of the Report reviews the evolution of international production networks over the past three decades and examines the configuration of these networks today. It then projects likely course changes for the next decade due to the combined effects of the pandemic and pre-existing megatrends, including the new industrial revolution, the sustainability imperative and the retreat of laissez faire policies. The system of international production underpins the economic growth and development prospects of most countries around the world. Governments worldwide will need to adapt their investment and development strategies to a changing international production landscape. At the request of the UN

General Assembly, the Report has added a dedicated section on investment in the Sustainable Development Goals, to review global progress and propose possible courses of action.

### **Fast Ion Transport in Solids B. Scrosati 2012-12-06**

The main motivation for the organization of the Advanced Research Workshop in Belgirate was the promotion of discussions on the most recent issues and the future perspectives in the field of Solid State Ionics. The location was chosen on purpose since Belgirate was the place where twenty years ago, also then under the sponsorship of NATO, the very first international meeting on this important and interdisciplinary field took place. That meeting was named "Fast Ion Transport in Solids" and gathered virtually everybody at that time having been active in any aspect of motion of ions in solids. The original Belgirate Meeting made for the first time visible the technological potential related to

the phenomenon of the fast ionic transport in solids and, accordingly, the field was given the name "Solid State Ionics". This field is now expanded to cover a wide range of technologies which includes chemical sensors for environmental and process control, electrochromic windows, mirrors and displays, fuel cells, high performance rechargeable batteries for stationary applications and electrotraction, chemotronics, semiconductor ionics, water electrolysis cells for hydrogen economy and other applications. The main idea for holding an anniversary meeting was that of discussing the most recent issues and the future perspectives of Solid State Ionics just twenty years after it has started at the same location on the lake Maggiore in North Italy.

Imaging to Help Diagnose Various Diseases Due to improvements in image quality and the reduced cost of advanced features, ultrasound imaging is playing a greater role in the diagnosis and image-guided intervention of a wide range of diseases. *Ultrasound Imaging and Therapy* highlights the latest advances in using ultrasound imaging in image-guided interventions and ultrasound-based therapy. The book presents current and emerging techniques, identifies trends in the use of ultrasound imaging, and addresses technical and computational problems that need to be solved. The book is organized into three sections. The first section covers advances in technology, including transducers (2-D, 3-D, and 4-D), beamformers, 3-D imaging systems, and blood velocity estimation systems. The second section focuses on diagnostic applications, such as elastography, quantitative techniques for therapy monitoring and diagnostic

imaging, and ultrasound tomography. The final section explains the use of ultrasound in image-guided interventions for image-guided biopsy and brain imaging.

The Control Revolution James Ralph Beniger 1986 Why do we find ourselves living in an Information Society? How did the collection, processing, and communication of information come to play an increasingly important role in advanced industrial countries relative to the roles of matter and energy? And why is this change recent--or is it? James

Beniger traces the origin of the Information Society to major economic and business crises of the past century. In the United States, applications of steam power in the early 1800s brought a dramatic rise in the speed, volume, and complexity of industrial processes, making them difficult to control. Scores of problems arose: fatal train wrecks, misplacement of freight cars for months at a time, loss of shipments, inability to maintain high rates of inventory turnover. Inevitably the Industrial Revolution, with its ballooning use of energy to drive material processes, required a corresponding growth in the exploitation of information: "the Control Revolution." Between the 1840s and the 1920s came most of the important information-processing and communication technologies still in use today: telegraphy, modern bureaucracy, rotary power printing, the postage stamp, paper money, typewriter, telephone, punch-card processing,

motion pictures, radio, and television. Beniger shows that more recent developments in microprocessors, computers, and telecommunications are only a smooth continuation of this "Control Revolution." Along the way he touches on many fascinating topics: why breakfast was invented, how trademarks came to be worth more than the companies that own them, why some employees wear uniforms, and whether time zones will always be necessary. The book is impressive not only for the breadth of its scholarship but also for the subtlety and force of its argument. It will be welcomed by sociologists, economists, historians of science and technology, and all curious in general.

**Transanal Endoscopic Microsurgery** Peter Cataldo  
2008-12-03 Cancer of the rectum continues to be a significant health problem in industrialized countries around the world. Relative 5-year survival rates in the USA for cancer of the rectum from 1995 to 2001 improved to 65%, a 15% improvement over 20 years (American Cancer Society, 2007). The reasons for this dramatic improvement include more accurate preoperative staging, aggressive neoadjuvant therapy and improved surgical technique as well as specialty-trained surgeons.

Despite advances in nonoperative techniques of radiation therapy, chemotherapy and immunotherapy, surgical extirpation continues to be the cornerstone of curative treatment of this potentially lethal disease. Radical cancer excision with total mesorectal excision has become the preferred surgical procedure for even early-stage cancers of the rectum. Over the past decade the enthusiasm for local excision (and other local treatments) has given way to persuasive (predominantly retrospective) evidence that the incidence of locoregional recurrence due to unsuspected lymphatic metastases and positive lateral margins is unacceptably high even for stage T tumors. Vigorous attempts to find characteristics of the 1 tumor that would allow successful local treatments are ongoing.

*Without Covers* Lesha Hurliman 2002 *Without Covers* is a unique insider's look at how literary

magazines have adapted to the arrival of the Internet age. It incites conversation, debate, argument, and most pressingly, questions regarding the reasons behind and effects of small literary magazines moving to online publishing. Questions discussed are: Is it possible? How? When? and the most puzzling, Why? Through the musings of nineteen well-known editors, poets, fiction, nonfiction, and hypertext writers, readers can eavesdrop into a discussion of the purpose and politics of online publishing that has created a new bridge between traditional literary interests and current institutional, cultural, and financial pressures to focus on technology.

*Forest Dynamics, Growth and Yield* Hans Pretzsch  
2009-06-19 The aim of this book is to improve the understanding of forest dynamics and the sustainable management of forest ecosystems. How do tree crowns, trees or entire forest stands respond to thinning in the long term? What effect do tree

species mixtures and multi-layering have on the productivity and stability of trees, stands or forest enterprises? How do tree and stand growth respond to stress factors such as climate change or air pollution? Furthermore, in the event that one has acquired knowledge about the effects of thinning, mixture and stress, how can one make that knowledge applicable to decision-making in forestry practice? The experimental designs, analytical methods, general relationships and models for answering questions of this kind are the focus of this book. Given the structures dealt with, which range from plant organs to the tree, stand and enterprise levels, and the processes analysed in a time frame of days or months to decades or even centuries, this book is directed at all readers interested in trees, forest stands and forest ecosystems. This work has been compiled for students, scientists, lecturers, forest planners, forest

managers, and consultants.

Capitalist Nigger Chika Onyeani 2012-03-27

Capitalist Nigger is an explosive and jarring indictment of the black race. The book asserts that the Negroid race, as naturally endowed as any other, is culpably a non-productive race, a consumer race that depends on other communities for its culture, its language, its feeding and its clothing. Despite enormous natural resources, blacks are

economic slaves because they lack the 'devil-may-care' attitude and the 'killer instinct' of the Caucasian, as well as the spider web mentality of the Asian. A Capitalist Nigger must embody ruthlessness in pursuit of excellence in his drive towards achieving the goal of becoming an economic warrior. In putting forward the idea of the Capitalist Nigger, Chika Onyeani charts a road to success whereby black economic warriors employ the 'Spider Web Doctrine' – discipline, self-reliance, ruthlessness – to escape from their victim mentality. Born in Nigeria, Chika Onyeani is a journalist, editor and former diplomat.

### **Ultrasound Diagnosis in Obstetrics and Gynecology**

M. Hansmann 2012-12-06 It will be a long time before the quality of this profusely illustrated book is overtaken and the present spate of books on the subject of obstetric ultrasound may, as a result, suffer a numerical set-back - especially with translation

into English which will "deliver the milk on everyone's doorstep". Two of the authors studied in our department in Glasgow and worked like If there are any rewards for teaching, then we humble Scots who demons. have had the privilege have had more than our share as a result of the pride with which we regard our pupils. In my own old age and looking back over the last thirty years, the innumer able difficulties, set-backs and disappointments have been more than compen sated for by those who have turned the subject from a laughable eccentricity (as I have at one time experienced) into a science of increasing exactitude. This transformation has come about, not by any efforts of mine, but by the enthusiasm and ingenuity of those who would probably have achieved as much on their own if given the encouragement which I ultimately received in Glasgow University life. Limbo must be the

expected lot of most of us ordinary mortals but the work lives on. And so, in this reminiscent and philosophical mood I beg leave to quote a little poem which I wrote at an age when young men do that sort of thing.

*CARS 2005* Heinz U. Lemke 2005 This volume contains the papers of the 19th International Congress of Computer Assisted Radiology and Surgery (CARS 2005) held in Berlin, Germany between 22 and 25 June 2005. For 20 years, CARS has developed a culture of innovation with its focus on interdisciplinary and international cooperation. In approximately 20,000 pages of proceedings written by several thousand authors from more than 50 countries, many innovative developments have been reported which now assist the daily practice of physicians in their care of patients. Examples are PACS, a concept on which CARS was founded, and computer assisted surgical tools and systems, which were initially reported in CAR 85 and have now become mainstream developments. Some of these innovations are incremental, making noticeable improvements in daily practice, but others like PACS or minimally invasive surgery are

transformational innovations in a sense that they have fundamentally changed the way "things" are done. CARS has established itself as the major event for the presentation of R & D work of high actuality. In addition to the traditional scientific/medical sessions, some of the outstanding topics presented and which are included in the CARS 2005 conference proceedings include: Interventional Radiology; Colon and Liver CAD; Intra-Operative Imaging; Minimal Invasive Spine Surgery; PACS Beyond Radiology (in conjunction with EuroPACS); Surgical PACS and the Digital Operating Room (in conjunction with SPIE Integrating the Health Care Enterprise (in conjunction with EuroPACS). The process of innovation in these fields is a continuum with many examples of other new developments being presented at CARS 2005, which marks the 20th anniversary of the congress.

**Chemical Triggering** Gebran J. Sabongi 2012-12-06  
Chemical reactions which can, on demand, be switched on and off are valuable for industrial applications. In order to make the best use of these reactions, it is essential to have them readily available for a research chemist. The chemical literature, in general, has not yet identified or grouped such reactions. However, their existence is relatively abundant. This book is meant as a survey of those reactions which have potential utility in industrially useful processes. These reactions are grouped under the title of chemical release reactions which can be triggered by heat, light, electric current, etc., to release a specific compound from, or change in the physical or chemical properties of, a

unimolecular reactant. The book is divided into chapters covering ways to trigger the release of certain chemicals. Each chapter is further divided into sections, each beginning with a brief introduction of analogies of the discussed reactions and of how they were used in reported industrial processes. This survey is not meant to be absolute or exhaustive but rather to be directive, to be as complete as possible, and to provide food for further thought.
