Introductory Statistical Mechanics Roger Bowley 1999 This book explains the ideas and techniques of statistical mechanics-the theory of condensed matter-in a simple and progressive way. The text starts with the laws of thermodynamics and simple ideas of quantum mechanics. The conceptual ideas underlying the subject are explained carefully; themathematical ideas are developed in parallel to give a coherent overall view. The text is illustrated with examples not just from solid state physics, but also from recent theories of radiation from black holes and recent data on the background radiation from the Cosmic background explorer. In thissecond edition, slightly more advanced material on statistical mechanics is introduced, material which students should meet in an undergraduate course. As a result the new edition contains three more chapters on phase transitions at an appropriate level for an undergraduate student. There are plentyof problems at the end of each chapter, and brief model answers are provided for odd-numbered problems. From reviews of the first edition: '...Introductory Statistical Mechanics is clear and crisp and takes advantage of the best parts of the many approaches to the subject' Physics Today

A Philosophy of Textile Catherine Dormor 2020-12-10 Textile is at once a language, a concept and a material thing. Philosophers such as Plato, Deleuze and Derrida have notably drawn on weaving processes to illustrate their ideas, and artists such as Ann Hamilton, Louise Bourgeois and Chiharu Shiota explore matters such as the seam, the needle and thread, and the flow of viscous materials in their work. Yet thinking about textile and making textile are often treated as separate and distinct practices, rather than parallel modes. This beautifully illustrated book brings together for the first time the language and materiality of textile to develop new models of thinking, writing and making. Through the work of thinkers such as Roland Barthes, Hélène Cixous and Luce Irigaray, and international artists like Eva Hesse and Helen Chadwick, textile practitioner, theorist and writer Catherine Dormor puts forward a new philosophy of textile. Exploring the material behaviours and philosophical language of folding, shimmering, seaming, viscosity, fraying and caressing, Dormor demonstrates how textile practice and theory are intricately woven together.
